

Assumptions:

- -Hospital is made up of Wards
- -Doctors and Nurses can be assigned to multiple wards
- -The system also keeps track of staff that are on leave (not assigned to a ward)
- -Hospital beds are kept in a single ward (can be moved to a different ward, but the history of wards is not tracked
- -Rooms can only belong to one ward
- -Patients have to be assigned a room
- -Patients have to be assigned to a ward
- -Prescribed relationship cardinalities are done from the perspective of the patient
- -All patients are part of the same health care system and thus will each have a unique health care number
- -Every medicine receives its own predetermined unique ID upon entering into the system, each batch of the same medicine will have the same ID
